Abstracts

Microwave Radio market, Microwave radios work on the underlying principle of microwave transmission. They transmit or exchange information between two devices using electromagnetic waves, having a wavelength ranging from 30 cm to 0.1 cm with radio spectrum of 1 GHz to 300 GHz. Microwaves follow point-to-point communication and can be easily directed by small-sized antennas, which point these narrow beams toward receiving antenna. The range of electromagnetic waves, which work on a frequency of above 30 GHz to below 100 GHz and have a wavelength of 10 mm to 3 mm, is called millimeter band. Radio waves in this band face strong attenuation from Earth's atmosphere. The waves with a wide band of frequencies, around 60 GHz, get attenuated by oxygen.

SCOPE OF THE REPORT:

This report focuses on the Microwave Radio in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The operators having 2G network in rural areas and the annual maintenance contracts or managed service (MS) contracts with end-to-end solution providers such as Ericsson and Huawei drive the global TDM Microwave Radio market. In addition, in many European countries, the operators have not planned to rule out 2G completely. This is because many system architectures of 4G networks do not support voice and is only for data throughput.

The worldwide market for Microwave Radio is expected to grow at a CAGR of roughly 19.8% over the next five years, will reach 18100 million US\$ in 2023, from 7320 million

US\$ in 2017, according to a new GIR (Global Info Research) study.
