Abstracts

Industrial explosives are high hazard blasting explosives primarily used in the mining and construction industry. Among them, mining explosive occupies the largest market share, and it can be widely used in coal mining, quarrying mining, nonmetal mining and metal mining. Coal mining is the most important application area of mining explosive.

SCOPE OF THE REPORT:

This report focuses on the Mining Explosives in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Mining explosives, most based on ammonium nitrate and in the form of bulk or packaged types, are widely used in mines, quarrying and nonmetal mining as well as metal mining. Many coal mines use explosives to loosen the rock and coal. In surface mining, holes are drilled through the overburden, loaded with explosives, and discharged, shattering the rock in the overburden. In one underground mining method, the coal is blasted off the bed without any undercutting to help break it down. Actually, coal mine is the largest consumer of mining explosives, which held 74.72% market share globally in 2016.

Orica is the largest manufacturer of mining explosives. With manufacture facilities located in the important mining regions, the company has become a key player and has footprints in many countries.

The worldwide market for Mining Explosives is expected to grow at a CAGR of roughly 2.5% over the next five years, will reach 16000 million US\$ in 2023, from 13900 million US\$ in 2017, according to a new GIR (Global Info Research) study.
