## Abstracts

Moissanite is a gemstone born from the stars. It was first discovered in 1893 by a French scientist named Henri Moissan, who later won the Nobel Prize in Chemistry. He discovered microscopic particles of the gem that would eventually bear his name in Arizona, in a crater created by a meteorite that fell to Earth. He initially thought that he had discovered diamonds, but later determined that the crystals were composed of silicon carbide.

Natural moissanite is incredibly rare, so moissanite available today is laboratory-created. Moissanite is engineered to give the illusion of similarity to diamonds, but is compositionally and visually quite different from a real diamond. The durability, brilliance, and color of the two gems are quite distinct.

### SCOPE OF THE REPORT:

This report focuses on the Moissanite in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Moissanite is engineered to give the illusion of similarity to diamonds, but is compositionally and visually quite different from a real diamond. The durability, brilliance, and color of the two gems are quite distinct. The market volume of Moissanite is related to downstream demand and global economy. Although there will always be some uncertainties in the global economy in the following years, the industrial policy support for this market, the downstream demand for Moissanite is increasing, it is forecasted that the market of Moissanite is still promising.

With the rapid development of economy and people's awareness and acceptance of Moissanite is increased, global demand for Moissanite is increasing. The patent held by

Charles and Colvard protected moissanite from being cut into gem expired. Many new players have entered or will enter this market. Moissanite is a good substitute of diamond owing to its resemblance as diamond and its lower price and that is the reason that we believe there will be new enterprises and investors entering into this industry. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.

The worldwide market for Moissanite is expected to grow at a CAGR of roughly 7.6% over the next five years, will reach 41 million US\$ in 2023, from 27 million US\$ in 2017, according to a new GIR (Global Info Research) study.
