Abstracts

Monazite is a rare phosphate mineral with a chemical composition of (Ce, La, Nd, Th) (PO₄, SiO₄). It usually occurs in small isolated grains, as an accessory mineral in igneous and metamorphic rocks such as granite, pegmatite, schist, and gneiss. These grains are resistant to weathering and become concentrated in soils and sediments downslope from the host rock. When in high enough concentrations, they are mined for their rare earth and thorium content.

SCOPE OF THE REPORT:

This report focuses on the Monazite in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Currently, some companies in China can produce Monazite product. The main market players are Hongyuan Rare Earth, Xiangjiang River Rare Earth, etc. The production of monazite decreases from 18365 Ton in 2011 to 7700 Ton in 2016. In Monazite market, the revenue of monazite decreases from 2383000 K RMB in 2011 to 323850 K RMB in 2016. Hongyuan Rare Earth occupied 61.16% of the production market in 2015. Xiangjiang River Rare Earth has around 38.84% of the China industry. China has banned a single quarry mining live alone. And the main sources of Monazite are the domestic mineral processing enterprises or import the sand containing zircon. Fluctuations in the price of the upstream product will impact on the production cost of Monazite industry. We tend to believe this industry is a dim future industry, the production and revenue of China Monazite is decrease.

The worldwide market for Monazite is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
