## **Abstracts**

Magnetic Resonance Imaging System is the system using the principle of NMR ( Nuclear Magnetic Resonance, abbreviated NMR ), the energy released in accordance with different structures within the physical environment in different attenuation, with the application of gradient magnetic field detecting the electromagnetic waves emitted can establish the object that nucleus position and kind, accordingly, the object can be shown in the image in the shape of internal structure.

Magnetic Resonance Imaging (MRI) is a medical imaging procedure that uses strong magnetic fields and radio waves to produce cross-sectional images of organs and internal structures in the body. In many cases, MRI gives different information about structures in the body than can be seen with an X-ray, ultrasound, or computed tomography (CT) scan. MRI also may show problems that cannot be seen with other imaging methods.
