Abstracts

Naphtha is a liquid made from the distillation of coal tar or petroleum. The mixture depends upon the hydrocarbons used and the temperature they are boiled. It looks like gasoline.

SCOPE OF THE REPORT:

This report focuses on the Naphtha in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Naphtha is mainly considered as the initial block for building petrochemicals. It is used as feedstock in petrochemical steam crackers, and the primary products of the cracking process are olefins such as ethylene, propylene, butylenes and butadiene.

Naphtha is a product manufactured from refining of crude oil. Crude oil is a highly volatile commodity due to its widening supply demand gap. Crude oil is a major raw material for the production of naphtha. So any imbalance in crude oil affects its pricing structure which ultimately leads to its volatility in the global market. Volatility in crude oil prices can be seen further in its refining products i.e. propylene and butadiene.

The worldwide market for Naphtha is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
