Abstracts

Natural gas is produced using conventional or renewable method. It is a clean-burning alternative fuel in the transportation sector and must be compressed or liquefied for use in vehicles.

SCOPE OF THE REPORT:

This report focuses on the Natural Gas Refueling Stations in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Natural gas refuelling stations are places to refuel Natural gas vehicles (NGVs) that look similar to those for diesel or gasoline. The refueling process of natural gas depends on whether compressed natural gas (CNG) or liquefied natural gas (LNG) is being used. A CNG station requires more equipment however an LNG station requires more safety precaution while fueling since it is stored at extremely cold temperature. There are about 24,000 natural gas refueling stations in the world.

CO2 emissions have been growing in accord with an increase in economic activities and there is a rising concern over the emission of CO2. Since the burning of natural gas results in less emissions, there is a rise in its usage from the transportation sector. This will in turn, drive the need for natural gas refueling stations, fueling market growth.

The worldwide market for Natural Gas Refueling Stations is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
