Abstracts

Non-Contact Temperature Sensors, whose the sensing element does not contact with the measured object, is also called as non-contact thermometers. This type of sensors is used to measure the temperature of moving objects, small objects or objects whose temperature change rapidly. And also be used for measurement of temperature distribution. Non-contact (infrared) temperature sensing reads temperature by intercepting a portion of the infrared energy emitted by an object or substance, and detecting its intensity. Non-contact is used to sense the temperature of solids and liquids, but cannot be used on gases due to their transparent nature.

SCOPE OF THE REPORT:

This report focuses on the Non-Contact Temperature Sensors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

According to QYResearch, the global Non-Contact Temperature Sensors market will grow 14.81 percent to \$633.46 million in 2015.

Fluke captured the top one revenue share spots in the Non-Contact Temperature Sensors market in 2015. Fluke dominated with 19.13 percent revenue share, followed by Accurate Sensors with 10.97 percent revenue share and OMRON with 8.49 percent revenue share.

In the next five years, the global consumption of Non-Contact Temperature Sensors will show upward tendency further, consumption is expected in 2020 will be 57137 (k units). Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter

into the field. Technology and cost are two major problems. Although sales of Non-Contact Temperature Sensors brought a lot of opportunities, for the new entrants with only advantage in capital without sufficient support in technology and downstream channels, the research group did not recommend taking risk the enter this market.

The worldwide market for Non-Contact Temperature Sensors is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
