Abstracts

In recent years, non-radioactive nucleic acid labeling and detection methodologies have become available in response to a desire by researchers and their institutions to move away from the use of radioisotopes. Advancements made in the areas of chemiluminescence and fluorescence have allowed for an easier transition. In non-radioactive assays, signal is generated through an enzymatic reaction with a chemiluminescent or chromogenic substrate; alternatively, detection can occur through the appropriate excitation and emission of a fluorophore-labeled probe.

SCOPE OF THE REPORT:

This report focuses on the Non-Radioactive Nucleic Acid Labeling Product in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The classification of non-radioactive nucleic acid labeling product includes biotin, DIG system, fluorescent and others. The proportion of DIG system in 2017 is about 33%, and the proportion is in increasing trend from 2013 to 2017.
