Abstracts

Self-propelled jack-up vessel is a vessel specifically designed for the installation of offshore wind turbines. Similar to a jack-up rig it is self-elevating. To enable quick relocation in the wind farm it is self-propelled. It also has a slender ship shaped hull to achieve a quick turnaround time with the vessel carrying several foundations or wind turbines each time. Azimuth thrusters are used to position the vessel during jack-up operations.

SCOPE OF THE REPORT:

This report focuses on the Offshore Wind Turbine Installation Vessel in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Driven by the increasing demand of constructing offshore wind farm with higher requirements on capacity and efficiency, the demand of specially designed vessel is facing a sudden increase. But in root, offshore wind turbine installation vessel is not a common used equipment; the fleet size will never be enough large for every ship builder to have chance to achieve an order. The market competition of ship building is quite fierce worldwide currently; for the building of offshore wind turbine installation vessel, the competition is surely forecasted to be fierce.

The advantages or benefits of wind power, is unnecessary to mention again. And we think that nobody would doubt there is vast market for wind power. The game of offshore wind power is just at the beginning, as well as the good days for offshore wind

turbine installation vessel runners.

The worldwide market for Offshore Wind Turbine Installation Vessel is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
