Abstracts

Subsea Umbilicals, Risers & Flowlines (SURF) refer to the cable those used in the operation of subsea oil or gas plant.

An umbilical, or umbilical cable, is a static or dynamic cable that is the vital link between subsea production and processing systems and the surface, as well as between elements within the larger subsea system via flying leads. Umbilicals are composite cables that have the ability to carry out a large range of processes. Flowlines transport unprocessed fluids from the subsea well to the riser. The riser then transports the fluids to the surface processing system.
