Abstracts

Paclitaxel Injection is a kind of anti-cancer injection taking paclitaxel API as raw material. It is mainly used in breast cancer, ovarian cancer and other cancers. Paclitaxel injection comes as a liquid to be given intravenously (into a vein) by a doctor or nurse in a hospital or clinic. It is usually given once every 3 weeks. When paclitaxel injection manufactured with polyoxyethylated castor oil is used to treat Kaposi's sarcoma, it may be given once every 2 or 3 weeks.

SCOPE OF THE REPORT:

This report focuses on the Paclitaxel Injection in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In recent years, the growing population and increasing disease incidence of ovarian cancer, breast cancer and other cancers drive the global paclitaxel injection industry developing.

In the past five years from 2010-2014, global paclitaxel injection industry developed fast with a larger than 15% annual production growth rate. In China, due to the late start, the production growth rate is 12%~17%, which is a little lower than global average.

In the next few years, with the growing attention on women cancers from the whole society and much larger investment on R&D of paclitaxel injection, this industry will continue developing at a high speed. What's more, because of the high gross profit of producing and selling paclitaxel injection, more and more investors will enter into this industry.

At present, the production of paclitaxel injection mainly concentrated in US, China and EU, the three regions produced about 77.30% of the global total products. Of those, US

are the largest production region with a 42.69% of global production market share.

In the future, with the expanded capacity of paclitaxel injection, the manufacturers will face the high risk of price and gross margin decline.

The worldwide market for Paclitaxel Injection is expected to grow at a CAGR of roughly 11.0% over the next five years, will reach 3680 million US\$ in 2023, from 2180 million US\$ in 2017, according to a new GIR (Global Info Research) study.
