Abstracts

This report studies the Passive and Interconnecting Electronic Components market. Passive electronic components are those that don't have the ability to control current by means of another electrical signal. Examples of passive electronic components are capacitors, resistors, inductors, transformers, and diodes. Generally, electrical connector is a device that connects two active devices, transmitting current or signals.

SCOPE OF THE REPORT:

This report focuses on the Passive and Interconnecting Electronic Components in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The Passive and Interconnecting Electronic Components industry concentration is not high; there are more than one thousand manufacturers in the world, and high-end products mainly from USA, Japan and European.

The international leading companies such as APP who prefer setting up factories directly into aimed market, and taking own sales department to expand market. The giant companies are more likely to set their own big agents in some major countries and regions taking charge of regional business building their international market position. Companies in developing countries such as China and India, in contrast, put more effort on direct selling business. They can act as exports at the same time, and it is a common phenomenon in this industry. As they do not have that much international brand influence, their product quality is not good enough when comparing with leading

companies, however, they have price advantage. They like to expand their market share in developing countries and low-end international market.

In the Passive and Interconnecting Electronic Components market, there still has a distinct feature that the import and export rate of this industry is not high caused by the fact that many international manufactures expand their business through building factories or investments.

The worldwide market for Passive and Interconnecting Electronic Components is expected to grow at a CAGR of roughly 4.2% over the next five years, will reach 33300 million US\$ in 2023, from 26000 million US\$ in 2017, according to a new GIR (Global Info Research) study.
