Abstracts

Peptide Synthesizer is an instrument used for peptide synthesis according to the principle of solid phase peptide synthesis. Peptides are used to prepare epitope-specific antibodies, map antibody epitopes and enzyme binding sites and to design novel enzymes, drugs and vaccines. Peptide synthesis is characterized as the formation of a peptide bond between two amino acids.

SCOPE OF THE REPORT:

This report focuses on the Peptide Synthesizer in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. China is the emerging market of peptide synthesizer. Thanks to supportive policies, the development of peptide synthesizer market in China will be faster and faster. Now, peptide synthesizers imported has occupied a large market share in China, and there is still a considerable gap between synthesizer made in China and abroad.

For the application, today, most peptide synthesizers are applied in labs, both in universities and pharm companies. The market of peptide synthesizers used for commercial production is still limited, which is expected to get a large development once the peptide therapy industry makes a breakthrough.

The worldwide market for Peptide Synthesizer is expected to grow at a CAGR of roughly 2.7% over the next five years, will reach 76 million US\$ in 2023, from 65 million US\$ in 2017, according to a new GIR (Global Info Research) study.
