Abstracts

A polymer is a large molecule, or macromolecule, composed of many repeated subunits. Because of their broad range of properties, both synthetic and natural polymers play an essential and ubiquitous role in everyday life. Polymers range from familiar synthetic plastics such as polystyrene to natural biopolymers such as DNA and proteins that are fundamental to biological structure and function. Polymers, both natural and synthetic, are created via polymerization of many small molecules, known as monomers. Their consequently large molecular mass relative to small molecule compounds produces unique physical properties, including toughness, viscoelasticity, and a tendency to form glasses and semi crystalline structures rather than crystals.

SCOPE OF THE REPORT:

This report focuses on the Polymers in Medical Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the world wide, major manufactures mainly distribute in North America and Europe. In North America, transnational companies, like Dupont and Celanese are taking a leading share in this area. As to Netherlands, DSM has become a global leader. In Germany, it is BASF and Bayer that lead the technology development. In China, the manufactures focus in Tianjin and Shanghai.

North America is the largest consumer of Polymers in medical devices and is expected to retain the higher growth rate during the next five years due to strong growth in medical devices industry. China and Japan have witnessed a major chunk of the production and consumption of Polymers in Medical Devices in the Asia Pacific region. Actually, that is why manufacturers have several plants, usually close to aimed demand

market.

All manufactures in the world are committed to the improvement of product. These two years, some of Chinese manufactures can almost catch up with the world's leading technology too. Most technologies are developed by the manufacturers instead of importing from other companies.

The worldwide market for Polymers in Medical Devices is expected to grow at a CAGR of roughly 2.7% over the next five years, will reach 5330 million US\$ in 2023, from 4560 million US\$ in 2017, according to a new GIR (Global Info Research) study.
