Abstracts

Polyurea coating is that derived from the reaction product of an isocyanate component and a resin blend component. It has a composition which is a combination of the above-mentioned two coating systems. The isocyanate component can be the same as for the “pure” polyurea systems. The resin blend is a blend of amine-terminated and hydroxyl-terminated polymer resins and/or chain extenders. The resin blend may also contain additives, or non-primary components. To bring the reactivity of the hydroxyl-containing resins to the same level of reactivity as the amine-terminated resins, the addition of one or more catalysts is necessary.

SCOPE OF THE REPORT:

This report focuses on the Polyurea Coatings in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Europe, USA and China are the mainly consumption regions due to the larger demand in building & construction and transportation industry. In 2015, USA occupied 27.91% of the global consumption volume, while China takes market share of 15.92%. Leading consumption regions in Europe are Germany, France, UK, and Italy. The Polyurea Coatings industry has high technical barrier. The products are diversified, making it hard for customers to choose from one and another. Consequently, post sales technical services are crucial to downstream customers. To Polyurea Coatings manufacturers, the core of brand building is in quality control and technological innovation.

The worldwide market for Polyurea Coatings is expected to grow at a CAGR of roughly

2.1% over the next five years, will reach 770 million US\$ in 2023, from 680 million US\$ in 2017, according to a new GIR (Global Info Research) study.
