Abstracts

Pressure Vessels is a closed container designed to hold gases or liquids at a pressure substantially different from the ambient pressure.

The pressure differential is dangerous, and fatal accidents have occurred in the history of pressure vessel development and operation. Consequently, pressure vessel design, manufacture, and operation are regulated by engineering authorities backed by legislation. For these reasons, the definition of a pressure vessel varies from country to country, but involves parameters such as maximum safe operating pressure and temperature, and are engineered with a safety factor, corrosion allowance, minimum design temperature (for brittle fracture), and involve nondestructive testing, such as ultrasonic testing, radiography, and pressure tests, usually involving water, also known as a hydro-test, but could be pneumatically tested involving air or another gas.

SCOPE OF THE REPORT:

This report focuses on the Pressure Vessels in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In consumption market, North America are the mainly consumption regions due to the demand of downstream applications. In 2017, it occupied 32.8% of the global consumption volume in total.

Pressure vessels could be applied in many fields, such as petrochemical, oil & gas, coal chemical, nuclear power, non-ferrous metal and others. With the development of economy, the downstream application industries will need more pressure vessels. So, pressure vessel has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce good performance pressure vessels through

improving manufacturing process.

The major raw materials of pressure vessels are steel, copper, aluminum, etc. Fluctuations in the price of the upstream product will impact on the production cost of pressure vessels, and then impact the price of pressure vessels.

The worldwide market for Pressure Vessels is expected to grow at a CAGR of roughly -0.2% over the next five years, will reach 102900 million US\$ in 2023, from 103900 million US\$ in 2017, according to a new GIR (Global Info Research) study.
