Abstracts

Pyridine is a colorless to yellow liquid with an unpleasant smell. It can be made from crude coal tar or through chemical synthesis (the latter one is the mainstream production method presently).

Pyridine, as a basic organic chemical, is a versatile building block and excellent solvent in agrochemical, pharmaceutical and other industries.

SCOPE OF THE REPORT:

This report focuses on the Pyridine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Pyridine, completely soluble in water, alcohol, ether and benzene, is a versatile building block and excellent solvent in agrochemical, pharmaceutical and other industries.

Initially pyridines were isolated from coal tars; currently, above 95% of pyridines are got through chemical synthesis. The major raw materials to synthesize pyridines are acetaldehyde, formaldehyde and anhydrous ammonia.

USA, India, China and Japan are major production base of pyridine. Among those regions, China is the largest producer of pyridine, accounting for 46.51% market share in 2015. China begins to impose anti-dumping taxes on the imported pyridines from Indian and Japan from November of 2013 and the anti-dumping taxes will last for five years. Recently, China's Ministry of Commerce has lowered the anti-dumping taxes of an Indian company, Jubilant Life Sciences.

Agrochemical industry is the largest consumer of pyridine. Although some country have implemented bans on usages of paraquat and those bans impact the market of pyridine, pyridine industry still have market potential in other fields, such as pharmaceutical

industry, cosmetics industry, paints, and so on.

The worldwide market for Pyridine is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
