Abstracts

A reach stacker is a vehicle used for handling intermodal cargo containers in small terminals or medium-sized ports. Reach stackers are able to transport a container short distances very quickly and pile them in various rows depending on its access.

Reach stackers have gained ground in container handling in most markets because of their flexibility and higher stacking and storage capacity when compared to forklift trucks. Using reach stackers, container blocks can be kept 4-deep due to second row access.

SCOPE OF THE REPORT:

This report focuses on the Reach Stacker in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The Europe is the largest market for Reach Stackers, followed by USA with respective volume shares of 40.95% and 26.28% in 2015. Europe is the largest regional market with 37.93% of global market volume, followed by Asia Pacific and North America.
