## Abstracts

Restriction Endonuclease is an enzyme that cuts DNA at or near specific recognition nucleotide sequences known as restriction sites. They are the enzymes that are found in the bacteria and are harvested from them for their use in research and commercial aspects. Restriction enzymes are commonly classified into four types, which differ in their structure and whether they cut their DNA substrate at their recognition site, or if the recognition and cleavage sites are separate from one another.

### SCOPE OF THE REPORT:

This report focuses on the Restriction Endonucleases in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Till date more than 10,000 bacteria are screened for the presence of restriction enzymes and currently there are more than 2,500 restriction enzymes have been discovered along with over 250 distinct specificities in sequences. These enzymes are used in conventional cloning, deciphering epigenetic modifications, construction of DNA libraries and in vivo gene editing. The end users mainly are Academic & Research Institutes, Hospitals & Diagnostic Centers, and Pharmaceutical & Biotechnology companies.

The Restriction Endonuclease industry is relatively concentrated, and the players mainly come from North America and Western Europe. In the world wide, major manufactures mainly are New England Biolabs, Thermo Fisher Scientific, Takara Bio, Illumina, Agilent Technologies, Roche, GE Healthcare, Promega Corporation, Qiagen, Jena Biosciences and etc.

The worldwide market for Restriction Endonucleases is expected to grow at a CAGR of roughly 5.6% over the next five years, will reach 300 million US\$ in 2023, from 210 million US\$ in 2017, according to a new GIR (Global Info Research) study.
