Abstracts

Respirator is a device designed to protect the wearer from inhaling particulate matter, including airborne microorganisms, fumes, vapours, i.e. gases. Respirators range from relatively inexpensive single-use, disposable face masks to more robust reusable models with replaceable cartridges and are used by the military, private industry and the public.

Reusable respirators are available in both the half-face and full-face variety and can offer protection not only against airborne particulates, but gases, fumes and vapors as well. For most reusable respirators, you will need to purchase cartridges or filters to attach to the facepiece. The type of cartridges or filters you will need to purchase is dependent on the level of protection you desire.

SCOPE OF THE REPORT:

This report focuses on the Reusable Respirators in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In Consumption market, Europe reusable respirators market revenue will increase to 19491 K Units in 2017 from 12832 K Units in 2012, is the biggest consumption area in current market pattern. North America ranks the second largest consumption area, with sales volume and market share of 17214 K Units and 29.91% in 2016.

In the past few years, the price of reusable respirators decreased and we expect the price has pressure to increase in short time. However, the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of Reusable Respirators. Therefore, to some extent, the companies are facing a risk of profit decline.

There are companies adding capacities and aiming at the cost and quality leadership which shall improve profitability. At the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The total competition market for Reusable Respirators will become more weakened, while the market is going to be more concentrated for high end Reusable Respirators.

The worldwide market for Reusable Respirators is expected to grow at a CAGR of roughly 6.3% over the next five years, will reach 2260 million US\$ in 2023, from 1670 million US\$ in 2017, according to a new GIR (Global Info Research) study.
