Abstracts

Rheology modifiers, commonly referred to as thickeners or viscosifiers, are ever-present in most products to provide specific functionality to the product. Rheological modifiers are the key components in paints & coatings as they reduce dripping and spattering of fluid during roller or brush application. It provides high viscosity at low shear rates that is useful during drilling high-angle and horizontal wells and it also prevents sag and settling of weighting material. Rheology modifiers prevent sedimentation of pigments within a formulation and ensure consistency and durability of the fluid.

SCOPE OF THE REPORT:

This report focuses on the Rheology Modifiers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

As international economic situation is complicated, in the next few years there will be many uncertainties although. Due to the government' policy and the high production of Rheology Modifiers in the international market, the current demand for Rheology Modifiers product is relatively high in the mature market, such as EU and US.

In 2014, the global production of the Rheology Modifiers reaches over 398.15K MT; the growth rate is around 4.3% during the last five years. And we estimate the growth rate will be stable in the following years.

Rheology Modifiers is mainly produced by BYK, Basf Se, DOW, Lubrizol, Arkema, etc. Although sales of Rheology Modifiers brought a lot of opportunities, the industry barrier is rather high. Therefore, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the Rheology Modifiers field hastily.

The worldwide market for Rheology Modifiers is expected to grow at a CAGR of roughly 3.9% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
