Safety Signs are crucial in any work environment. The primary importance of displaying Safety Signs is to prevent injury and ensure staff and visitors are well aware of the possible dangers and hazards ahead in certain situations and/or environments.

Safety signs are being developed with innovations in material and source of power. One trend in the market is product development. Safety signs are witnessing product development in the form of material used as well as source of power. For instance, solar safety signs were introduced in which the boards are sourced by a PV panel that ignites safety signs, making them visible. Furthermore, batteries are used to store solar energy in daytime that can be later used in night-time to power safety signs.

The worldwide market for Safety Signs is expected to grow at a CAGR of roughly 5.5% over the next five years, will reach 2160 million US\$ in 2023, from 1560 million US\$ in 2017, according to a new GIR (Global Info Research) study.
