Abstracts

Safety syringes are integrated with safety mechanisms that protect patients and healthcare professionals from accidental needle stick injuries. High risk associated with the unsafe handling of syringes that may transfer HIV, Hepatitis B, Hepatitis C and other blood borne diseases, encourages healthcare workers to adopt syringes with safety features. There are two major types of safety syringes available in the market, namely, retractable safety syringes and non-retractable safety syringes. Retractable safety syringes can be further categorized as the automatic retractable safety syringes and manual retractable safety syringes. Sheathing tube syringes equipped with sliding needle covers and hinged needle covers are the examples of non-retractable safety syringes.
