The dew point is the temperature at which the water vapor in a sample of air at constant barometric pressure condenses into liquid water at the same rate at which it evaporates. At temperatures below the dew point, the rate of condensation will be greater than that of evaporation, forming more liquid water. In short, the dew point is an accurate measurement of the moisture content in the air. Screw-in Dew-point Transmitters is a devices measuring the dew point of sample gas.

SCOPE OF THE REPORT:
