Abstracts

Sifting machine is a machine used to separate the products of grain milling by means of flat sieves that make successive circular movements on a horizontal plane.

The main parts of a sifting machine are the drive mechanism and the set of sieves mounted in the housing. Machines can have one or two housings, crank or self-balancing drive, and varying numbers of units where different mixtures can be simultaneously separated. The mixture being separated falls from one horizontal or sometimes slightly inclined sieve to another, is sifted, and forms usually from three to six groups, whose particles differ in size.

SCOPE OF THE REPORT:

This report focuses on the Sifting Machine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Globally, the Sifting Machine industry market is not that concentrated as the manufacturing technology of Sifting Machine is relatively much more mature than some high-tech equipment. But some enterprises are still well-known for the wonderful performance of their Sifting Machines and related services. At the same time, some countries such as Germany, UK and USA are remarkable in the global Sifting Machine industry because of their market share and technology status of Sifting Machine.

The consumption volume of Sifting Machine is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of Sifting Machine industry may not keep that fast. But it is surely forecasted that the market of Sifting Machine is still promising.

The product average price declined in the past few years due to the market competition

and the average price will keep the trend in the few future years due to most of Chinese manufacturers will enter the industry.
