## Abstracts

Simethicone is a mixture of polydimethylsiloxane and hydrated silica gel. It is an orally administered anti-foaming agent used to reduce bloating, discomfort or pain caused by excessive gas-mainly swallowed air, with small amounts of hydrogen and methane-in the stomach or intestines.

### SCOPE OF THE REPORT:

This report focuses on the Simethicone in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Simethicone is produced by polydimethylsiloxane and silicon dioxide at proper temperature and pressure. So, production process of simethicone is relatively simple. We tend to believe this industry is an emerging industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

The worldwide market for Simethicone is expected to grow at a CAGR of roughly 1.5% over the next five years, will reach 30 million US\$ in 2023, from 28 million US\$ in 2017, according to a new GIR (Global Info Research) study.
