Abstracts

A small wind turbine is a wind turbine used for microgeneration, as opposed to large commercial wind turbines, such as those found in wind farms, with greater individual power output.

SCOPE OF THE REPORT:

This report focuses on the Small Wind Turbines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The market volume of small wind turbines is related to economical and political factors. As there will always be some uncertainties in the global economy in the following years, the growth rate of small wind turbines market might not keep that fast. But it is surely forecasted that the market of small wind turbines is still promising. The significant rise in demand for renewable sources of energy generation coupled with rapid industrialization is a key driving factor boosting the small wind power market world-wide. Furthermore, growing concerns over adverse environmental impacts of power generated through fossil fuel will further result in the adoption of wind power as alternative sources of power as a convenient & cost-effective solution.

The worldwide market for Small Wind Turbines is expected to grow at a CAGR of roughly 9.8% over the next five years, will reach 400 million US\$ in 2023, from 230 million US\$ in 2017, according to a new GIR (Global Info Research) study.
