## Abstracts

In a large solar photovoltaic (PV) array, multiple solar modules are connected in series in a string to build the voltage up to proper levels for the inverter. Multiple strings of solar modules are then combined together in parallel to multiply the string output currents to higher levels for input into the inverter.

The smart PV combiner box is a device that combines the output of multiple strings of PV modules for connection to the inverter, support surge and overcurrent protection, and monitoring single-string current and voltage, surge protective device and breaker condition of PV array. It is typically used in the larger commercial and utility scale PV power plants (greater than 500kW).

### SCOPE OF THE REPORT:

This report focuses on the Smart PV Array Combiner Box in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. PV combiner box is widely used in large-scale grid-connected PV system, in order to reduce the cable cost between PV modules and inverter, to make it easy to install and maintain and also to improve the reliability. Monitoring and maintaining the electrical connections can help insure a high reliability and long lasting field installation.
