Abstracts

This report studies the Sodium Permanganate market, Sodium permanganate is the inorganic compound with the formula NaMnO_4 . It is a purplish colored crystalline solid. Sodium permanganate is a more convenient and concentrated form of permanganate when used for electronics and organic oxidation of fine chemicals and pharmaceuticals. It is also an effective oxidant recommended for potable drinking water applications including iron removal, manganese removal, mercaptan odor control, color reduction, and radium reduction.

SCOPE OF THE REPORT:

This report focuses on the Sodium Permanganate in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Sodium permanganate is mainly used for water treatment, electronics and fine chemicals & pharmaceuticals. Electronics are the most important application. In 2017, electronics application holds 36.2% of the consumption market share. Sodium permanganate can be used in any application where potassium permanganate is used but, because sodium permanganate, on a dry basis, is substantially more expensive than potassium permanganate, its uses are limited to those applications for which the customer is willing to pay a premium for sodium permanganate because of its advantages.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area. In the future, the market in developed countries will have some growth and the market in developing countries will have a faster growth rate. In the globe, emerging economies countries support water treatment

industry and electronics industry.

The worldwide market for Sodium Permanganate is expected to grow at a CAGR of roughly 4.5% over the next five years, will reach 71 million US\$ in 2023, from 54 million US\$ in 2017, according to a new GIR (Global Info Research) study.
