Abstracts

Solar PV is one kind of device made from crystalline silicon or thin film which converts solar energy into electricity by a process known as the photovoltaic effect. The key indicator for solar PV is conversion efficiency.

SCOPE OF THE REPORT:

This report focuses on the Solar PV in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. China is still the biggest market in the global Solar PV market, about 50% market share in 2015, the annual production is more than any single countries' double production and the capacity is expansion in these years, almost 60% occurs in China. The future capacity and production market share will increase, or at least maintain the current share. For these regions, Asia owns the largest market share comparing with Europe and North America, indicating the strong demand of Solar PV products.

The Solar PV industry concentration degree is relatively low, there are more than 200 manufacturers in the world and we think in the next few years, the concentration degree will rise.

Since the anti-dumping duties occurred, the competitive status has already turned white-hot, with the price declining, the gross profit of the whole industry is narrowing and it will be unsteady to some extent. The raw material's price is also uncertainty, currently; the raw material has a growth trend.

The worldwide market for Solar PV is expected to grow at a CAGR of roughly 2.7% over the next five years, will reach 52700 million US\$ in 2023, from 44800 million US\$ in

2017, according to a new GIR (Global Info Research) study.
