Abstracts

Solar Thermal Collector collects heat by absorbing sunlight. A collector is a device for capturing solar radiation. Solar radiation is energy in the form of electromagnetic radiation from the infrared (long) to the ultraviolet (short) wavelengths. The quantity of solar energy striking the Earth's surface (solar constant) averages about 1,000 watts per square meter under clear skies, depending upon weather conditions, location and orientation.

SCOPE OF THE REPORT:

This report focuses on the Solar Thermal Collector in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Although Chinese overall economic downward trend in the past few years, and international economic situation is complicated, the enormous potential of the solar thermal industry still make many manufacturers can't wait to enter into the market. In the future, solar thermal industry may be in a development peak period.

There is a certain market space in demand of solar thermal collectors, efficient solar thermal collectors will determine whether an enterprise can achieve a success, small and medium size enterprises need to increase investment in research and development to innovate new products
