## Abstracts

Emission control catalysts are now used on all types of internal combustion engines, as well as in a number of stationary applications. Catalytic reactors for mobile applications, known as catalytic converters, utilize catalyst-coated monolithic substrates. Terms which are used to characterize the catalyst performance include conversion efficiency, light-off temperature, and space velocity.

### SCOPE OF THE REPORT:

This report focuses on the Stationary Emission Control Catalyst in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The importance of emission control catalysts has been increasing as environmental concerns and measures to fight pollution have become more important globally. Emission control catalysts are divided into two types according to the source of the emission: emission control catalysts for mobile sources (such as automobile catalysts) and for stationary sources. The largest part of the market is the mobile emission catalyst segment; the stationary emission catalyst market is smaller.

Following the success in mobile engine applications, catalyst technologies were introduced for stationary applications, for the control of volatile organic compounds (VOC) and NO<sub>x</sub> emissions. The list of catalyst applications covers such emission sources as chemical plants, painting and coating processes, ovens, printing, dry cleaning, power generation, and, last but not least, stationary engines. Examples of catalyst technologies for stationary engines include non-selective catalytic reduction (NSCR) of NO<sub>x</sub> from rich burn natural gas engines and selective catalytic reduction

(SCR) of NOx by ammonia from diesel engines.

USA is the largest consumption country of Stationary Emission Control Catalyst products in the world in the past few years while the market share increased to about 20.53% in 2015 from 24.85% in 2011.

The worldwide market for Stationary Emission Control Catalyst is expected to grow at a CAGR of roughly 1.0% over the next five years, will reach 580 million US\$ in 2023, from 550 million US\$ in 2017, according to a new GIR (Global Info Research) study.
