A telescope is an instrument that aids in the observation of remote objects by collecting electromagnetic radiation. In this report, we mainly research on the market of astronomical telescope industry. Astronomical telescope consists of two convex lenses: objective and eye piece. The objective is a convex lens of large focal length and large aperture. It usually made of two convex lenses in contact with each other to reduce the chromatic and spherical aberrations. The eye piece is also a convex lens. Its focal length is smaller than that of objective. It is also a combination of two lenses.

SCOPE OF THE REPORT:

This report focuses on the Telescope in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Demand for telescope is mainly driven by the development of astronomical research and hobby increasing of scope. Increase on economic investment on astronomical research and the national consumption capacity, as well as the national policies on astronomical education are the main growth catalysts for the market of telescope. As to the product types and applications of telescope, refracting telescope and reflector telescope are main types and entry-level telescope account for about 90% of the total market.

The worldwide market for Telescope is expected to grow at a CAGR of roughly 2.1% over the next five years, will reach 170 million US\$ in 2023, from 150 million US\$ in 2017, according to a new GIR (Global Info Research) study.
