Temperature and humidity logger is an electronic device used to record the temperature and relative humidity data measured with instruments or sensors. Modern temperature and humidity loggers are small, battery powered and portable. They are mainly used to monitor the transport situation of sensitive products such as pharmaceuticals, storage situation of pharmaceuticals, drying degree of building materials and industrial production environment.

SCOPE OF THE REPORT:

This report focuses on the Temperature and Humidity Logger in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In the past several years, the temperature and humidity logger industry have got a large development.

The development of temperature and humidity logger industry has closely relationship with the development of pharmaceutical industry, which is the largest consumption market. And with the development, temperature and humidity loggers can be applied in more areas.

As the development of Chinese temperature and humidity logger industry, the product price decreased a lot. More Chinese enterprises entered into this market, which bring a large growth of capacity.

Now, the global market is still monopolized by these famous international manufacturers, though the market concentrate degree is still relatively low. Almost all these famous manufacturers with large capacity are located in Europe, USA and Japan.
