Abstracts

Tool Steel refers to a variety of carbon and alloy steels that are particularly well-suited to be made into tools. Tool steels are notable for their hardness, resistance to abrasion and deformation. Today, tool steel is widely used in various specific tool applications like dies, cutting, mold-making and hammers (personal or industrial).

Tool Steel can retain a cutting edge at very high temperatures which is why they are often used in the shaping of other materials through cutting, pressing, coining or extruding. Their resistance to abrasion lends to their use in the production of injection molds.
