## **Abstracts**

Transformers for switching power supplies (also known as switch mode power supply transformers and SMPS transformers) are using in a regulated power supply and function to step up or step down voltage or current, and/or provide isolation between the input and output side of a switch mode power supply. On the primary side of a switch mode transformer, the duty cycle (on time) of the input voltage waveform is varied (switched) to deliver a constant output voltage over varying load conditions.

Transformers for Switching Power Supplies (SMPS transformers) are designed to operate at frequencies of 10 kHz to 1 MHz Switch mode transformer (switch mode power supply transformer) power levels now extend into the 50 kilowatt range
