The giant companies are more likely to set their own big agents in some major countries and regions taking charge of regional business building their international market position.

Companies in developing countries such as China, in contrast, put more effort on direct selling business. They can act as exports at the same time, and it is a common phenomenon in this industry. As they do not have that much international brand influence, their product quality is not good enough when comparing with leading companies, however, they have price advantage. They like to expand their market share in developing countries and low-end international market.

The market is not only influenced by the price, the Lighting, semiconductor, industrial applications and photovoltaic, but also influenced by the product performance. Although China domestic companies have price advantage, the application is narrow to some extent due to the poor manufacture processing, cheap raw material and less diversity of products.

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market.

Looking to the future years, the slow upward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

The worldwide market for Transparent Quartz Tube is expected to grow at a CAGR of roughly 7.9% over the next five years, will reach 1140 million US\$ in 2023, from 720 million US\$ in 2017, according to a new GIR (Global Info Research) study.
