Triethylaluminium (TEAL) is an organoaluminium compound with colorless and transparent liquid, which formula is $Al_2(C_2H_5)_6$. It can be soluble in hydrocarbon solvents such as hexane, heptane, or toluene and ignite immediately upon exposure to air. At room temperature, it needs to be saved in the inert gas.

SCOPE OF THE REPORT:

This report focuses on the Triethylaluminum in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Triethylaluminium (TEAL) is an organoaluminium compound with colorless and transparent liquid, which is often used in polyolefin catalyst, organic synthesis and military. With the development of economy, triethylaluminum has huge market potential in the future.

Ethylene, hydrogen, aluminum powder are the main raw materials for the production of triethylaluminum. With the development of triethylaluminum, raw materials' manufacturers are also benefited from the triethylaluminum industry in some extent. The manufacturers are concentrated in USA, Europe and China. Sasol O&S is the largest manufacturer in the global, whose production has reached 7010MT in 2014. The triethylaluminum industry develops fast in China, the average speed reaches 14.75% during 2010 to 2014. Europe and USA are the main consumers in 2014.

All manufactures in the world are committed to the improvement of product. In recent two years, some Chinese manufactures can almost catch up with the world's leading technology.

This industry is affected by the economy and policy, so it's important to put an eye to

economic indexes and leaders' prefer.

The global triethylaluminum production will increase to 35766 MT in 2015, from 19789 MT in 2010, it is estimated that the global triethylaluminum demand will develop with an average growth rate of about 16.15% in the coming five years.

We tend to believe this industry now is close to mature, and the consumption increasing degree will show a slow decline curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

The worldwide market for Triethylaluminum is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
