Abstracts

Tuberculin, also known as purified protein derivative is a combination of proteins that are used in the diagnosis of tuberculosis. This use is referred to as the tuberculin skin test and is recommended only for those at high risk. Injection is done into the skin. After 48 to 72 hours if there is more than a five to ten millimeter area of swelling the test is considered positive.

A tuberculin skin test (also called a Mantoux tuberculin test) is done to see if people have ever been exposed to tuberculosis (TB). The test is done by putting a small amount of TB protein (antigens) under the top layer of skin on the inner forearm.

SCOPE OF THE REPORT:

This report focuses on the Tuberculin in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
