Abstracts

Ultrafine silica fume, also known as Microsilica, is an ultrafine powder collected as a by-product of the silicon and ferrosilicon alloy production. Silica fume is an ultrafine material with 80% spherical particles less than 1 μ m in diameter, the average being about 0.15 μ m. So it also called the ultrafine silica fume.

SCOPE OF THE REPORT:

This report focuses on the Ultrafine Silica Fume in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Silica fume is an ultrafine powder collected as a by-product of the silicon and ferrosilicon alloy production. The “smoke” leaving the plant is actually silica fume. Today in the countries, due to pressure for environmental protection, no silica fume is allowed to escape to the atmosphere.

With the fast developing of concrete, cement, refractory products, demand of ultrafine silica fume will increase in the next five years; we hope that the global demand of ultrafine silica fume will keeps on increasing.

The worldwide market for Ultrafine Silica Fume is expected to grow at a CAGR of roughly 3.7% over the next five years, will reach 730 million US\$ in 2023, from 580 million US\$ in 2017, according to a new GIR (Global Info Research) study.
