Abstracts

Landing gear system is a vital component installed on every UAV. It ensures a stable support for the UAVs at rest on the ground, establishing an appropriate shock-absorbing device and enabling the chassis to move for taxiing during manhandling. It is a mechanical system that absorbs loads during landing and taxiing, as well as transfers substantial part of these loads to the airframe, dissipating majority of the impact energy. The main functions of such landing gears include energy absorption, taxi control, and braking.

SCOPE OF THE REPORT:

This report focuses on the Unmanned Aerial Vehicle Landing Gears in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
