Abstracts

Ultraviolet curing (commonly known as UV curing) is a photochemical process in which high-intensity ultraviolet light is used to instantly cure or “dry” inks, coatings or adhesives. Offering many advantages over traditional drying methods, UV curing has been shown to increase production speed, reduce reject rates, improve scratch and solvent resistance, and facilitate superior bonding.

SCOPE OF THE REPORT:

This report focuses on the UV Curing Machine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Globally, the UV curing machine industry market is not that concentrated as the manufacturing technology of UV curing machine is relatively much more mature than some high-tech equipment. But some enterprises are still well-known for the wonderful performance of their UV curing machines and related services. At the same time, some countries such as Germany, UK and USA are remarkable in the global UV curing machine industry because of their market share and technology status of UV curing machine.

The consumption volume of UV curing machine is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of UV curing machine industry may not keep that fast.
