Abstracts

The electromagnetic spectrum of ultraviolet light can be subdivided in a number of ways. The draft ISO standard on determining solar irradiances (ISO-DIS-21348) describes the UVA (400~315nm), UVB (315~280nm), UVC (280~100nm). UVC LED is a kind of Ultra-violet LED (UV LED) with light emitted in the UVC spectrum.

SCOPE OF THE REPORT:

This report focuses on the UVC LED in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
The highest penetration and usage of UV LEDs today is in curing applications, but other applications such as water and air disinfection are increasing their reliance on UV LEDs as the technology evolves. This growth is expected to continue in the next five years and new potential applications will emerge. The largest growth opportunities will stem from new applications such as the UV-C integration into everyday items like into refrigerators for disinfection, which has huge potential.
As large demand of UVC LED product, the domestic enterprises should hold the opportunity to improve their technology with domestic advantages, such as low raw material price. we tend to believe this industry now should improve in technology, and the consumption increasing degree will show a slowly growth curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

The worldwide market for UVC LED is expected to grow at a CAGR of roughly 92.3%
