Abstracts

Vascular closure devices are medical devices used to achieve hemostasis of the small hole in the artery after a cardiovascular procedure of endovascular surgery requiring a catheterization. The devices seal the puncture site in an artery (the arteriotomy) through mechanical means rather than relying on the body's natural clotting response.

SCOPE OF THE REPORT:

This report focuses on the Vascular Closure Devices (VCDS) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The North America regions suggest an array of opportunities for growth and are likely to be getting into the eyes of new investors in the vascular closure market. Growth is attributed to rising prevalence of lifestyle diseases and government initiatives in establishing innovative technologies and demand for sophisticated medical services. The Vascular closure market is expected to grow steadily in the forecast period. The factors driving the growth of this market are increasing catheterization related procedures (PCI), preference for minimally-invasive solutions & rise in vascular procedures. Ease in usage and quick hemostatic properties of VCDs and increased utilization of transradial arterial access are some of the opportunities that are propelling the growth of the market.

High price of products, complications associated with VCD, less adoption of novel technologies in emerging countries are hampering the market of vascular closure. Reduced reimbursement, usage of animal related sources and lower revenue potential of VCD are threats for the market growth.

The worldwide market for Vascular Closure Devices (VCDS) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
