Abstracts

Vertical-axis wind turbines (VAWTs) are a type of wind turbine where the main rotor shaft is set vertically and the main components are located at the base of the turbine. This arrangement allows the generator and gearbox to be located close to the ground, facilitating service and repair. VAWTs do not need to be pointed into the wind, which removes the need for wind-sensing and orientation mechanisms. Vertical axis wind turbines offer several potential advantages over the standard horizontal axis wind turbines which are now in common use worldwide.

SCOPE OF THE REPORT:

This report focuses on the Vertical Axis Wind Turbine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The US and Europe are the major suppliers of vertical axis wind turbine and also the major consumption markets. In the US, the large land makes it expansive to connect the remote villages into grid. And there is also massive wind power resource, which drive the development of vertical axis wind turbine industry.

China is another major consumption market. Due to the supportive policies established in recent years, the wind power industry is fast developing. In China, the added capacity of wind turbine is more than 100 megawatts in 2014, while most of them are horizontal axis wind turbines.

The worldwide market for Vertical Axis Wind Turbine is expected to grow at a CAGR of roughly 4.4% over the next five years, will reach 16300 million US\$ in 2023, from 12600

million US\$ in 2017, according to a new GIR (Global Info Research) study.
