Abstracts

Waste-to-Energy (WTE) technology utilizes Municipal Solid Waste (MSW) to create electric and heat energy through various complex conversion methods WTE technology provides an alternative source of renewable energy in a world with limited or challenged fossil reserves.

MSW is considered a source of renewable energy because it contains a large amount of biological and renewable materials.

WTE (Waste-to-Energy) is the process of generating energy in the form of electricity and/or heat from the primary treatment of waste. WTE is a form of energy recovery. Most WTE processes produce electricity and/or heat directly through combustion, or produce a combustible fuel commodity, such as methane, methanol, ethanol or synthetic fuels.
