## Abstracts

This report studies the water electrolysis market.

Electrolysis is a promising option for hydrogen production from renewable resources. Electrolysis is the process of using electricity to split water into hydrogen and oxygen. This reaction takes place in a unit called an electrolyze. Electrolyzes can range in size from small, appliance-size equipment that is well-suited for small-scale distributed hydrogen production to large-scale, central production facilities that could be tied directly to renewable or other non-greenhouse-gas-emitting forms of electricity production.

Like fuel cells, electrolyzes consist of an anode and a cathode separated by an electrolyte. Different electrolyzes function in slightly different ways, mainly due to the different type of electrolyte material involved.

### SCOPE OF THE REPORT:

This report focuses on the Water Electrolysis in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Electrolysis is a promising option for hydrogen production from renewable resources. Electrolysis is the process of using electricity to split water into hydrogen and oxygen. This reaction takes place in a unit called an electrolyze. Electrolyzes can range in size from small, appliance-size equipment that is well-suited for small-scale distributed hydrogen production to large-scale, central production facilities that could be tied directly to renewable or other non-greenhouse-gas-emitting forms of electricity production.

Currently, water electrolysis is classified into two types, including traditional alkaline

electroliser and PEM electroliser. In China, traditional alkaline electroliser took the larger market share. In 2017, China consumed 189 Unit traditional alkaline electroliser and 25 Unit PEM electroliser. Compared with traditional alkaline electroliser, PEM electroliser price is higher. PEM electroliser development is limited by high raw material cost.

Water electrolysis can be used in many fields. In China, it is mainly used in energy storage or fueling for FCEV's, power plants, steel plant, electronics and photovoltaics and industrial gases etc. Power plant is the largest application field in 2017, which consumed 113 Unit water electrolysis. In the future, energy storage or fueling for FCEV's industry have great market potential.

The worldwide market for Water Electrolysis is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
