### SCOPE OF THE REPORT:

This report focuses on the White Fused Alumina in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

White Fused Alumina (WFA) is obtained from the fusion of high purity calcined alumina in electric arc furnaces. WFA is raw material characterized with high hardness, yet friable with high purity, chemical stability, a high melting point, and large crystal size.

The production of white fused aluminum is mainly concentrated in China. In 2016, China contributed about 41.20% production market share. The decreasing share of China in the year was caused by some WFA' stopped production, due to the environment pollution.

The worldwide market for White Fused Alumina is expected to grow at a CAGR of roughly 2.4% over the next five years, will reach 490 million US\$ in 2023, from 430 million US\$ in 2017, according to a new GIR (Global Info Research) study.
