Abstracts

Wireless intrusion detection systems (WIDS) and wireless intrusion protection systems (WIPS) are used to continuously protect a wireless network and in some cases, a wired network, from unauthorized users. There are some basic differences between the two systems. In a WIDS, a system of sensors is used to monitor the network for the intrusion of unauthorized devices, such as rogue access points. In a WIPS, the system not only detects unauthorized devices, but also takes steps to mitigate the threat by containing the device and detaching it from the wireless network.

SCOPE OF THE REPORT:

This report focuses on the Wireless Intrusion Detection and Prevention Systems (WIPDS) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Wireless intrusion detection systems (WIDS) and wireless intrusion protection systems (WIPS) are used to continuously protect a wireless network and in some cases, a wired network, from unauthorized users. WIDS and WIPS operate 24/7 and generally require no management or admin involvement. They guard the wireless local area network (WLAN) on a constant basis and listen to all radio traffic within the WLAN's operating frequencies.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group

recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

The worldwide market for Wireless Intrusion Detection and Prevention Systems (WIPDS) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
